Bayern Software Releases New Data Backup And Disaster Recovery Solutions For The Metals Industry

Phoenix, AZ – Bayern Software, a leading developer of enterprise software solutions for metal service centers and distributors, has announced the release of their new product STEEL PLUS DataVault. This new program provides easy-to-use and low cost data backup and disaster recovery solutions for all types of computerized data. Companies do not have to be a current Bayern customer to use these new programs.

The STEEL PLUS DataVault program runs on a local network and automatically backs up data to a secure off-site data center in Dallas, Texas using a broadband internet connection. Data is also co-located in another data center in the United Kingdom. All types of data and databases can be backed up securely and with relatively low cost. Data plans start as low as \$20 per month.

Greg Bayer, President of Bayern Software said “We are very glad to be able to provide this new service to our customers and to the industry in general. It has become very apparent that many companies neglect their data backups and do not have a disaster recovery plan in place. STEEL PLUS DataVault should help remedy this situation.”

STEEL PLUS DataVault also provides for a true “failover” solution. Should your server go down for any reason (hardware failure, theft, fire, flood, etc.), you can use the Internet to connect to your data in Bayern’s secure data center and be back up and running in no time.

About Bayern Software

Headquartered in Phoenix, Arizona, Bayern Software has been a market leader in the development of specialty software for metal service centers and distributors for 25 years. Bayern’s software products are actively used by over 325 North American service centers and distributors. Bayern provides accounting, inventory control, sales, purchasing, document imaging, labor tracking, and barcoding software solutions to the metals industry.

Using a unique approach, Bayern has succeeded in bringing to market robust applications that work equally well for flat rolled products, plate, general line, structural products, tool steel, and specialty service centers.
